

VITÁLE®

Hydroconductive Dressings & Ropes

Vitale® Hydroconductive Dressings & Ropes are preferred when the wound bed needs preparation for healing. The hydroconductive action of this dressing draws drainage away from the wound bed efficiently & quickly, and the stream of fluid takes infection, slough, wound debris, and harmful MMP's along with it. Newly formed (granulation) tissue is not damaged during this process.

Vitale Hydroconductive Dressings are made of a proprietary blend of fibers, layered to promote absorbency in multiple ways. The resultant hydroconductive action is truly effective in helping prepare the wound bed for healing.

Indications:

Vitale Hydroconductive Dressings & Ropes are for single use only, and may be used for treatment of the following types of wounds.

Superficial or Deep

Moderate to Heavy Exuding Wounds

- Complex Surgical Wounds
- Burns

- Pressure Ulcers (Stage 2-4)
- Leg & Foot Ulcers

Do not use Hydroconductive Dressings with arterial bleeding.

Features & Benefits:

Hydroconductive Action

Absorbs and removes excessive exudate. Draws out harmful MMP's. Facilitates removal of wound debris & bacteria.

Wound bed preparation

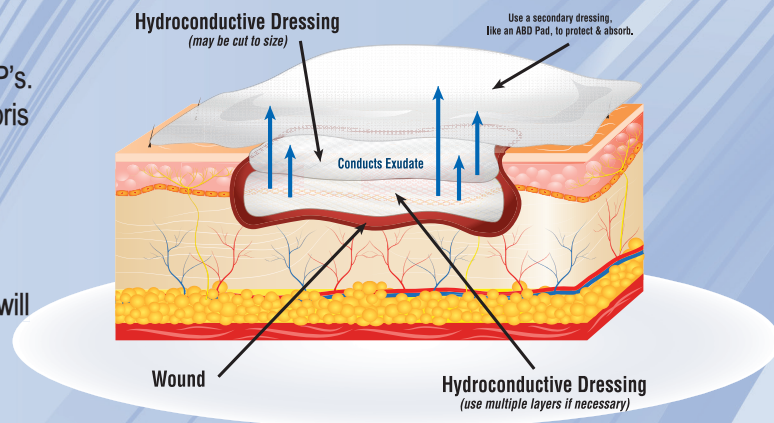

Prepares the wound bed for endogenous healing.

Even absorption

Moves exudate up and out, and will transfer moisture to additional layers if necessary.

Pure white color

Helps clinicians distinguish between dry & moist dressings.
